

STATUS OF SPORTS TRAINING BACHELOR TRAINING RESULT AT BAC NINH SPORT UNIVERSITY

Nguyen Van Hoa¹, Nguyen Xuan Trai¹

Abstract:

The study has evaluated the status of Sports Training Bachelor training result at Bac Ninh Sport University through interview with 4 selected criteria. This is the basis for managers to propose solutions to the education quality improvement.

Key words: Bachelor training results, Sports Training Branch...

INTRODUCTION

Collecting information or feedback on the effectiveness of the training program from all related units is extremely urgent. Therefore, evaluation the current situation of Sports Training Bachelor training result is an important task, which is the basis for managers to propose solutions to improve the quality of Sports Training Bachelor training.

RESEARCH METHODS

In the research, we have used methods of document analysis and synthesis, pedagogical observation, interview and discussion, mathematical statistics.

RESULTS AND DISCUSSION

Through interview, we have selected 4 criteria reflecting the Bachelor training results of Sports Training Branch. The results are as follows:

1. Learning results of students in modules

In the research, we have conducted

observations and statistics of the students' all learning results of the graduated courses. Results are in Tables 1, 2, 3 and 4.

Table 1, 2, 3 and 4 show that during the first and second years, students are unfamiliar with the method of university education, so their results are not high, mainly good and average classification. However, in the third and fourth years, their results are much higher with a significantly increased number of excellent and very good students. It proves that students gradually adapt to the learning environment and determine right learning motivation.

2. Specialized sports training results of students

The evaluation results of student's specialized sport skill indicate students' capacity in learning theory and method of the specialized sport training. The results are in Table 5.

Table 5 shows that most of students' GPA are classified as excellent and very good in their specialized sports modules. There are a few of

Table 1. Grade point average (GPA) learning results of students' first year

No.	University Course (UC)	1st year GPA	Excellent		Very good		Good		Average		Weak		Poor		Total
			m _i	%	m _i	%	m _i	%	m _i	%	m _i	%	m _i	%

students classified as good. There is no student classified as average, weak and poor. This is a positive result of the training process.

3. Training results of the graduated students

The Council has assessed students' training point by the sequence from specialized head teacher to the Department Council and finally the University Council. The results are in Table 6.

Table 6 shows that the training results of the students in courses are relatively high with 18.46% of excellent students, 34.66% of very good students, 43.33% of good students and

3.54% of average students and 0% of weak and poor students.

4. Statistics the student's graduation rate

Up to now, there have been 08 graduated courses from Sports Training Department. The results are shown in Table 7.

Table 7 shows that the rate of undergraduate students accounts for more than a quarter. They are mainly students who study cumulative program, study and simultaneously play for teams, o. They often come back to school to finish their study in two additional semesters on Tet and summer holidays. Because of the short

study time and great number of subjects, the rate of undergraduate students is high.

CONCLUSION

Various graduate students of the Sports Training Department have quite high performance in learning and training. There are no students classified as average. Especially for specialized sports skills, most of students have very good and excellent classification.
